# Bin factor parameter controls optimality and speed

H3K36me3 example data set, PeakSegJoint model with 2 peaks.

# H3K36me3 data, cDPA and heuristic algorithms

# Heuristic is much faster than cDPA

# Heuristic often as good as cDPA

# Weighted train error not good for model selection

# Select L1-regularized model with minimal validation error

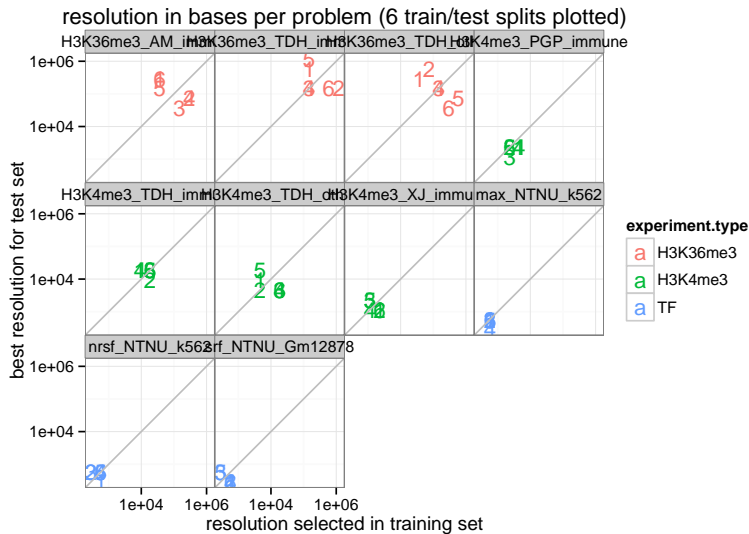

## Size of positive regions good heuristic for initial grid search

6 train/test splits per data set.

# Resolution with min annotation error same across train/test splits

6 train/test splits per data set.
